Welding is NEVER typical!

I could count on one hand the number of *typical* welding jobs we've done in the last month. Our team **MUST** be ready for the tight spots and unusual angles...and they have be able to do it right.

-Jerry Sanders

Skills Test

It's no secret that when you apply for a welding job with us, our welding skills test is tougher than most companies.

Our skills test includes three levels of review including horizontal, vertical and overhead welding of structural, pipe and stainless steel materials.

When our welders fire up, you can be assured that they will do the job with extreme precision and quality.

Structural and Custom Fabrication

We hire only certified welders with superior skills in specialty metal fabricating and repairing. Bring us your welding and steel fabrication needs! Our in-house specialty fabrication shop can handle quick or complicated projects including industrial access stairs, catwalks, mezzanines and miscellaneous weldments.

Job Applicants: We are always searching for talented and skilled members to join our team. We offer challenging full-time positions with paid healthcare, vacation benefit and overtime. Visit our website and click on employment to learn more.

Our team is experienced and specialized for any job. We welcome the opportunity to be your partner too! We can help your people, or we can do the entire job at hourly or contract rates.

What is a "Safety Stand-Down?"

In the construction industry, a Safety Stand-Down is an event where normal work is put on hold while the site focuses on a safety issue. This is because the workers "stand-down" for about an hour to review important safety topics, and also give their feedback about current safety procedures.

The largest and most well-known of these "Stand Downs" is the National Safety Stand-Down, presented by OSHA, that usually occurs in the beginning half of May. Job sites nationwide will pause what they are doing during this time to focus on safety issues and make sure that every employee or worker has the knowledge to keep themselves safe. During this May event, the focus is on fall protection and how workers can protect themselves from falls.

In our series of meetings we asked our crews a series of questions including:

- Do you know your fall hazards?
- Do you know how to inspect your fall protection gear?
- Do you know how and what to look for on your harness and lanyards?
- We discussed Webbing Visual and Touch Inspection, Hardware Visual and Touch Inspection, Tagging Systems, Cleaning and Storage, and

Harness Checklist.

- In closing, we reviewing our policies on reporting equipment and issues and our goals in Fall Protection/Equipment.

Falls are still the #1 cause of death on job sites – and have been for quite some time. In fact, the numbers show no signs of subsiding. In 2016, 84 out of 991 total deaths in construction were from falls. Many construction workers are not aware of these alarming statistics. That is why Safety Stand-Downs are so important.

The sad thing is that injuries from falls are 100% preventable. By wearing correct fall protection equipment, practicing simple safety tips, and continuing to be diligent on job sites, it's possible to reduce that number to 0.
